Classic wow gnomish engineering

Engineering is one of the most popular professions in Classic because it is widely regarded as the best in many PvP and PvE dungeon/raid situations, as well as for twinks. It is also the only profession in the game to offer companion pets. Paladins, lacking ranged attacks, can also use some bombs for ranged damage when needed. Springspindle Fizzlegear in Tinker Town of Ironforge Springspindle Fizzlegear Roxxiik in Nogg's Machine Shop of Orgrimmar Roxxiik Buzzek Bracketswing in Gadgetzan, Tanaris Buzzek Bracketswing Buzzek Bracketswing is the only Engineer who you can learn Artisan Engineering from. Let's go into a little bit more detail about Mr. Bracketswing's importance. Buzzek Bracketswing is a very notable Engineering trainer, located in Gadgetzan, Tanaris. He can train every rank of Engineering: Apprentice, Journeyman, Expert and Artisan. It is with him that you can advance your skill from 225 to 300. Here are the schematics you'll learn from him: Find an anvil - you must be within vicinity of one to craft most items. Have all of the crafting materials and tools in your bags, not in your bank. Open your spellbook ('P' is the default keybind). Look for the icon & click on it. Your Engineering skill is now opened. Select a recipe to view how to create. Select 'Create' once you have all of your materials. Engineering primarily requires metal bars, mined as ore and then smelted into bars by Miners. However, some recipes also require herbs, cloth, or leather. Many Engineering schematics also require you to craft components like screws or tubes, which are then used in more advanced schematics. For example, requires Handful of Copper Bolts, which in turn are also crafted from Engineering. While some professions allow you to simply create items without additional fuss, for Engineers you must have certain combinations of tools in your bags. Visiting any of these items in our database, and clicking on the "Tools" tab, will show you what items require them. The following leveling guide is primarily focused on the cost of purchasing materials, as opposed to gathering them with Mining. For example, the cost of Coarse Stone is usually higher than the cost of Silver Bar (depending on your server) - however, while leveling Mining you will certainly have a surplus of Coarse Stone. Engineering is one of the more difficult professions to level up efficiently, as there can be several deviations from this guide and frustrating skill level gaps (for example, around 175 to 200). In conjunction with this guide, use your best judgment. The Shadow Panther leveling guide for Engineering is also a viable alternative, with more detailed leveling options. As with all professions in World of Warcraft, the player gains skill points when performing a specific task (crafting an item, gathering a node, skinning a beast, etc). The frequency at which the player earns these skill points is relative to their current skill level. This is denoted by four color codes: Orange - Always grants a skill point Yellow - Frequently grants a skill point Green - Infrequently grants a skill point Gray - Does not grant a skill point Each rank of Engineering can be learned at the following skill levels and character levels: Below is an approximate list of materials you will need leveling Engineering from 1-300. These have been calculated for a high confidence level, but the actual amount may vary due to one's luck with gaining skill points. Yellow and especially green-level skill items may require multiple combinations to get a skill point. Crafted Ingredients: Follow the directions in the leveling guide and you'll be making these items for skill as you go along. There is no need to purchase these separately; the materials needed to create these are already included in the shopping list above. Once players have reached an Engineering skill of 200 and a character level of 30, they can choose to specialize in either Gnomish Engineering or Goblin Engineering. Keep in mind that choosing a specialization is optional. Both specializations can create powerful items that are applicable in both PvE and PvP. Gnomish Engineering provides more equipment, whereas Goblin Engineering provides more consumables. Gnomish Engineering Questline Upon reaching level 30 and reaching 200 Engineering skill, players can pick up the quest Gnome Engineering from multiple Engineering trainers, which will lead them to either Tinkmaster Overspark in Ironforge (for Alliance players), or Oglethorpe Obnoticus in Stranglethorn Vale's Booty Bay (for Horde players). Once the 'Gnome Engineering' quest has been completed, the quest The Pledge of Secrecy / The Pledge of Secrecy becomes available. This is a relatively simple quest simply reaffirming your choice to pursue the Gnomish Engineering specialization. After turning in the The Pledge of Secrecy quest, the quest Show Your Work / Show Your Work becomes available. Players must obtain 6 Mithril Tube, 2 Advanced Target Dummy, and 1 Accurate Scope which can all be crafted with Engineering, traded, or purchased from the Auction House. Completing the Show Your Work quest will reward the player with the Gnomish Engineering specialization, as well as the Gnome Engineer Membership Card. This membership card will allow you to learn the schematics that are only available from the Gnomish Engineering Trainer, and the card lasts for 14 days of in-game time (336 hours). The membership card can be renewed through the quest Membership Card Renewal / Membership Card Renewal, which costs . In addition to completing this quest, the player will receive mail in-game containing the Gnome Engineer's Renewal Gift. This renewal gift item can contain several Engineering items and crafting materials, as well as unique schematics such as Schematic: Lil' Smoky. Gnomish Engineering Trainers There are two Gnomish Engineering Trainers: All Gnomish Engineering Schematics Gnomish Engineering is the preferred Engineering Specialization for Classic PvE content, especially among melee DPS. Gnomish Battle Chicken is a Bind on Pickup Trinket that summons a Pet. After being summoned, the Battle Chicken will attack the nearest target and has a chance on hit to trigger a Battle shout, Battle Squawk, which increases the Melee Attack Speed by all party members by 5%. Also in PvE, you will be able to use Dense Dynamite, a bomb that deals ~400 damage, which only has a cooldown of 60 seconds, which can be a significant boost in damage. The Arcanite Dragonling is another useful trinket. It attacks the nearest target, stacking Flame Buffet for increased fire damage taken, which is excellent against any enemy vulnerable to fire. As usual with Engineering, many of these items have powerful effects, but are prone to malfunctioning and backfiring on you. Schematics that are only available through Gnomish Engineering can be found below. Goblin Engineering Quests Upon reaching level 30 and reaching 200 Engineering skill, players can pick up the quest Goblin Engineering from Tinkerwiz in Ratchet in Northern Barrens, which will lead them to Nixx Sprocketspring in Gadgetzan in Tanaris. Once the Goblin Engineering quest has been completed, the quest The Pledge of Secrecy becomes available. This is a relatively simple quest simply reaffirming your choice to pursue the Goblin Engineering specialization. After turning in the quest The Pledge of Secrecy, the quest Show Your Work becomes available. Players must obtain 20 Big Iron Bomb, 20 Solid Dynamite, and 5 Explosive Sheep which can all be crafted with Engineering, traded, or purchased from the Auction House. Completing the quest Show Your Work will reward the player with the Goblin Engineering specialization, as well as the Goblin Engineer Membership Card. This membership card will allow you to learn the schematics that are only available from the Goblin Engineering Trainer, and the card lasts for 14 days of in-game time (336 hours). The membership card can be renewed through the quest Membership Card Renewal / Membership Card Renewal, which costs . In addition to completing this quest, the player will receive mail in-game containing the Goblin Engineer's Renewal Gift. This renewal gift item can contain several Engineering items and crafting materials, as well as unique schematics such as Schematic: Pet Bombing. Goblin Engineering Trainers There are two Goblin Engineering Trainers: Nixx Sprocketspring: Gadgetzan, Tanaris Vazario Linkgrease: Ratchet, Barrens All Goblin Engineering Schematics Goblin Engineering focuses more on explosives, which have great utility in both PvE and PvP environments. Goblin Sapper Charge is an absolute monster in world PvP and group battles, allowing a team to completely decimate the other if they time their Sappers. It's also extremely important in every PvP scenario to have Dense Dynamite and Iron Grenade in your bags. Goblin Rocket Helmet is a helmet item that will enable you to charge a target and "knocking them silly," which is an incapacitate effect that lasts for over 10 seconds. This can be a great tool to close the distance, as well as a great way to keep a target Crowd Controlled for a more extended period. Schematics that are only available through Goblin Engineering can be found below. If you're not happy with your specialty, or would like to change it, there is a way to do so in WoW Classic. You do, however, have to re-learn your profession. Here's how to do it: 1. Unlearn Engineering entirely Press 'K', by default, to open up your skill menu. Scroll to find your current profession. Click on it. Look for the red circle with a slash through it, next to the profession to unlearn. 2. Level Engineering, starting from scratch, and get back up to at least 200. 3. Travel to Steamwheedle Port in Tanaris and search for the gnome, Narain Soothfancy, located inside a hut: Narain Soothfancy 4. Inside the hut where he is located, you'll find Book "Evil Soothsaying for Dummies", that you can hover your cursor over and right-click on: This book allows you to change specializations that you've previously learned with your profession. There is currently no quest or fee involved in doing so! Below is a comprehensive list of items that can be created with Engineering, and where they can be learned/obtained. Engineers can craft many types of ammunition for Hunters, including Thorium Shells which is the best ammunition in the game. This can be converted into Thorium Headed Arrow via Arrows Are For Sissies. Biznicks 247x128 Accurascopes are also the best ranged enchant, also crafted by Engineers. Many Engineering devices and trinkets have powerful effects, but they can backfire on you on rare occasions! Explosives are a good way to increase your DPS in PvE and PvP situations, as well as AoE utility like stunning nearby mobs or generating threat. Unlike other professions, most gear crafted by Engineers also requires you to be an Engineer to equip it. Many crafted Engineering items are goggles. Besides looking cool for RP, these have powerful stats, such as Green Tinted Goggles which is great for twinks, and Green Lens which is prized by many casters for pre-raid BiS. Another type of crafted Engineering item are weapons, such as Core Marksman Rifle or Force Reactive Disk. The following items are needed to craft more elaborate Engineering items. Engineering isn't all about min-maxing PvE and PvP--you can have fun! Engineers can craft a variety of fireworks, several companion pets, and even toys like Steam Tonk Controller. As you can see, there's a massive amount of Engineering recipes and schematics. But for those of you who are looking for simply the best Engineering items, we've broken it down for both PvP and PvE. Are you interested in collecting every rare recipe? For a full list of Engineering schematics from special vendors, regardless of their use in PvE/PvP, check out Guide to Engineering Recipes from Vendors. Engineering is well known to be the PvP profession of choice in Classic WoW. This section covers some of the best PvP items for Engineers in Classic WoW. (Source) Gnomish Cloaking Device: can be used similarly to an Invisibility Potion; sneak by fights or get the jump on your enemies. SOURCE: Zan Shivsproket in Alterac Mountains (200) Goblin Sapper Charge: one of the MOST important items for large scale PvP. This item, while used in unison with teammates, is capable of wiping out masses of enemies. This is one of the biggest reasons to not stack up too much in large PvP scenarios. SOURCE: Goblin Engineering trainer (205) Gnomish Net-o-Matic Projector: like other CC items, is useful because it is always beneficial to be able to control your enemy's movement. In some match ups, locking down your opponent can heavily favor you in the battle if not ensure the victory. SOURCE: Gnomish Engineering trainer (210) Goblin Rocket Boots: along with any other movement speed item, is great in Warsong Gulch for flag running. Aside from flag running, these boots can also be used by several classes just to kite others easily. SOURCE: Goblin Engineering trainer (245) Goblin Rocket Helmet : amazing for pvp. It can immediately take one opponent out of a team fight in an instant! This item is a MUST HAVE for any hardcore pvp player. For horde, there is a helmet with a similar effect that does not require Engineering called Horned Viking Helmet. SOURCE: Goblin Engineering trainer (235) Gnomish Mind Control Cap: not only can you take one of the enemies out of the team fight, but you can make them fight for you for a short period of time! However, you cannot control what abilities the mind controlled person will use. SOURCE: Gnomish Engineering trainer (215) Gnomish Death Ray: is the type of trinket a player will use if they are trying to instantly burst another player down. This trinket ends up costing you some health, but is capable of doing some massive burst damage for just using one trinket slot. Sometimes this trinket can do over 2000 damage! SOURCE: Gnomish Engineering trainer (260) World Enlarger: does not inherently give you more damage, more health, or anything of that nature. All it does is make you smaller. HOWEVER, this minimizing effect stacks with the shrinking of Noggenfogger Elixir making the player incredibly small. Being this small sometimes allow you to sneakily capture a base and not be seen. SOURCE: Gnomish Engineering trainer (250) Thorium Grenade: and other grenades can be thrown from a distance and after a short delay, damage and stun anyone hit. This can be great in 1v1 scenarios or in group battles giving the player yet another tool to interrupt someone while getting a bit of extra damage in. Players can get really creative and even create combos using grenades to chain CC an enemy. SOURCE: Buzzek Bracketswing in Gadgetzan, Tanaris (260) Catseye Ultra Goggles: increases stealth detection, making it great against Rogues and Night Elves. It is the only stealth detection gear in the game, providing 9 points of detection. Catseye Elixir, a temporary consumable, provides 10 points. SOURCE: Level ~40 World Drop Flash Bomb: makes all beasts flee for 10 seconds--great if you need to get Hunter and Warlock pets off of you. SOURCE: Reward from Pearl Diving Major Recombobulator: is an item that is great when dueling a mage or against a mage heavy team. Typically it is better to break a Polymorph immediately instead of letting a Polymorph heal you, so that the mage does not have free reign to do as he pleases. SOURCE: Buzzek Bracketswing in Gadgetzan, Tanaris (275) Arcane Bomb: is one of the most expensive explosives an engineer can craft, but also one of the most deadly. In mass scale PvP if you can land this bomb on a group of casters, especially healers, the fight is over almost immediately. The damage that this bomb does is nothing to laugh at, but its true power comes from the silencing effect. 5 seconds is a huge amount of time to be completely taken out of a fight. SOURCE: Buzzek Bracketswing in Gadgetzan, Tanaris (300) Discombobulator Ray: does not do damage or stun. It is not capable of completely turning a team fight into your favor. However, it is great at what it does do, and that is enable you to chase someone down. It slows after activation, but most importantly, this item will automatically make any enemy dismount immediately when hit by the ray. SOURCE: Engineering trainers (160) Gyrofreeze Ice Reflector, Hyper-Radiant Flame Reflector, Ultra-Flash Shadow Reflector: are all trinkets that are based off of prediction, but if predicted well, can completely end a 1 on 1 fight. Any spell reflected with these items are reflected with full effects. This means that if the enemy uses a damage cool down to burst you, it will turn on them. If a Warlock casts Fear you, they will get feared instead. You get the point. All three of these reflectors are not cheap, but are an essential part of any PvPer's arsenal. SOURCE: Schematics sold by Xizzer Fizzbolt, dropped by Solakar Flamewreath, and dropped by Risen Inquisitor respectively. While Engineering is well known to be the best PvP profession of choice in Classic WoW, it is also extremely powerful in PvE dungeons and raids. Here are some of the best PvE Engineering items: Flame Deflector and Hyper-Radiant Flame Reflector, items that absorb and reflect Fire Damage, are very helpful in earlier raids such as Molten Core, Blackwing Lair, Onyxia. SOURCE: Dropped by Mekgineer Thermaplugg and Solakar Flamewreath respectively. Goblin Sapper Charge: instant bomb, deals nice AoE damage. Raids stack these together for tough pulls. Tanks also use these for helping maintain threat generation. That being said, most Engineering bombs, grenades, dynamites and more all can contribute to higher DPS/threat in PvE situations. SOURCE: Goblin Engineering trainer (205) Gnomish Battle Chicken and Arcanite Dragonling: will help boost your DPS, especially during boss fights, see Gnomish Engineering section for more details. SOURCE: Gnomish Engineering trainer (250), Engineering (300) Field Repair Bot 74A: group died a lot? No repair in sight? This will solve that problem! SOURCE: schematic lying on the ground in Blackrock Depths Goblin Jumper Cables XL: group wiped, but an Engineer survived? A successful use of these on a player who can Resurrect can save your group a lot of time running back & re-clearing. SOURCE: dropped by Plugger Spazzing in Blackrock Depths. Several Engineering items are very powerful for level 19 PvP Twinks. Green Tinted Goggles: Before you get your fishing hat, this is going to be your best option for a helm and it requires you to max Engineering. If RNG isn't in your favor, you might be using this for quite some time while you are trying to catch a Keefer's Angelfish. Taught by Engineering Trainers at 150. Minor Recombobulator: This is another item from Engineering that can hold one of your trinket slots while you are working toward your Arena Grand Master. Schematic sold by Fradd Swiftgear in Wetlands and Namdo Bizzfizzle (outside the Gnomeregan dungeon). Big Bronze Bomb: With this, Engineering gives any twink character the ability to stun enemies as well as deal a bit of extra fire damage. This item is extremely useful similar to how useful grenades are for max-level PVP. Taught by trainers at 140. In these guides we'll go through the best gear for a level 19 character, the differences between Horde and Alliance, play style, key abilities, useful professions...as well as tell you how best to manage your experience so that you don't accidentally level up to 20. Druid Twink Hunter Twink Mage Twink Paladin Twink Priest Twink Rogue Twink Shaman Twink Warlock Twink Warrior Twink Aquadynamic Fish Attractor: this is the best lure for Fishing, temporarily increasing your skill by +100. SOURCE: Engineering Trainer, 150 Parachute Cloak: Reduces your fall speed for 10 sec. Useful if a teleport malfunctions, or if you're trying to reach a hard-to-find area and want to avoid taking fall damage, or take a shortcut like jumping off the Thousand Needles mountains. SOURCE: World Drop Green Lens: Considered pre-raid Best in Slot for many casters, as the item can roll many +magic damage suffixes, such as +Shadow Damage for Warlocks. SOURCE: Buzzek Bracketswing, 245 Ultrasafe Transporter: Gadgetzan: Teleportation device to Gadgetzan in Tanaris, useful if you need to reach southern Kalimdor quickly. SOURCE: Gnomish Engineering, Jhordy Lapforge, 260 Dimensional Ripper - Everlook: Teleportation device to Everlook in Winterspring, useful if you need to reach northern Kalimdor quickly. SOURCE: Goblin Engineering, Zap Farflinger, 260 Thorium Shells: Best ammunition for Hunters in Classic WoW. SOURCE: World Drop. Salt Shaker: Needed by Leatherworkers to make Refined Deeprock Salt, in turn needed for the end-game crafting reagent Cured Rugged Hide. SOURCE: Taught by Buzzek Bracketswing, 250 Biznicks 247x128 Accurascopes: Best ranged enchantment, adding 3% hit to ranged attacks. SOURCE: Molten Core bosses. Engineering is the only profession in Classic to offer companions. Companions are cute little furry (or not so furry) friends that follow you around on your adventures. Engineering is notable due to being the only profession that offers companions. Some companions can be sold on the Auction House for a profit, and some companions are strictly only obtainable as an Engineer. You can read more about companions in our guide, Collectible Companions of Classic. Companion: Tranquil Mechanical Yeti / Tranquil Mechanical Yeti Profession: Engineering Pattern: Tranquil Mechanical Yeti - It is learned directly and not a dropped Schematic. 250 Engineering and level 55 required. Materials: Cured Rugged Hidex1, Thorium Widgetx4, Globe of Waterx2, Truesilver Transformerx2, Gold Power Corex1 Bind on Pickup: No, it is Bind on Use and therefore can be bought and sold on the Auction House Notes: To create this pet, you must learn how to by first completing Are We There, Yeti?. After reaching 250 Engineering and level 55, then talking to Umi Rumplesnickler, she will give you the follow up A Yeti of Your Own, and teach you how to make this companion. Companion: Lil' Smoky / Lil' Smoky Profession: Engineering - Gnomish Engineering Pattern: Schematic: Lil' Smoky Materials: Core of Earthx1, Gyrochronatomx2, Fused Wiringx1, Mithril Barx2, Bind on Pickup: Yes Notes: Only can be obtained through Gnomish Engineering, after renewing your membership. To do this, you can repeat the quest Membership Card Renewal / Membership Card Renewal, which rewards Gnome Engineer's Renewal Gift in your mail 24 hours after completing the quest. This quest costs each time. To do this quest you must have chosen to be a Gnomish Engineer, and be at least level 30. The Goblin Engineering equivalent is Schematic: Pet Bombing. You can read more on Goblin and Gnomish Engineering in our guide - Classic WoW Engineering Profession Guide & Leveling 1-300. Companion: Pet Bombing / Pet Bombing Profession: Engineering - Goblin Engineering Pattern: Schematic: Pet Bombing Materials: Big Iron Bombx1, Heart of Firex1, Fused Wiringx1, Mithril Barx6 Bind on Pickup: Yes Notes: Only can be obtained through Goblin Engineering, after renewing your membership. To do this, you can repeat the quest Membership Card Renewal / Membership Card Renewal, which rewards Goblin Engineer's Renewal Gift in your mail 24 hours after completing the quest. This quest costs each time. To do this quest you must have chosen to be a Goblin Engineer, and be at least level 30. The Gnomish Engineering equivalent is Schematic: Lil' Smoky. You can read more on Goblin and Gnomish Engineering in our guide - Classic WoW Engineering Profession Guide & Leveling 1-300. Companion: Lifelike Mechanical Toad / Lifelike Toad Profession: Engineering Pattern: Schematic: Lifelike Mechanical Toad Materials: Living Essencex1, Thorium Widgetx4, Gold Power Corex1, Rugged Leatherx1 Bind on Pickup: No, it is Bind on Use and therefore can be bought and sold on the Auction House Notes: The Schematic is considered a world drop, and can be dropped by many high level creatures on Azeroth, found in Mithril Lockbox, and rarely the Gurubashi Arena Chest. This Schematic can be costly to obtain from the Auction House, however the pet can be bought for cheaper. 265 Engineering is required to make the Lifelike Mechanical Toad. Companion: Mechanical Squirrel Box / Mechanical Squirrel Profession: Engineering Pattern: Schematic: Mechanical Squirrel Box Materials: Broken Modulatorx1, Handful of Copper Boltsx1, Copper Barx1, Malachitex2 Bind on Pickup: No, it is Bind on Use and therefore can be bought and sold on the Auction House Notes: The Schematic is considered a world drop, and can be dropped by many lower level creatures on Azeroth. It is less rare than the Schematic: Lifelike Mechanical Toad. 75 Engineering is required to make the Mechanical Squirrel Box. The following quests require items created by Engineers as part of their objectives. Argent Dawn Ashenvale Badlands Darkmoon Faire (Phase 3) Dire Maul A Broken Trap - Allows players to activate the Frost Trap as part of a Tribute Run. Gnomish Engineering Goblin Engineering Show Your Work - Grants access to Goblin Engineering schematics. Lunar Festival Magram Centaur Gizmo for Warug - Leads to Khan Shaka. Silithus Thorium Headed Arrows Un'Goro Crater Chasing A-Me 01 - Leads to Chasing A-Me 01. Dungeon Set 2 Questline have been playing World of Warcraft since December of 2004, with a majority of my time being from the Classic, Burning Crusade, and Wrath of the Lich King expansions as an Orc Rogue on the US Gilneas realm. Over time I have become more attracted to the tanking role and PvE content, and now my focus has shifted to all aspects of World of Warcraft: Classic. I had previously worked at Blizzard Entertainment as a Game Master from April 2015 to December 2018, where I often found myself creating internal articles for my coworkers to use (some of which became external articles for players to use). As a result, I figured this skillset would be useful for creating guides about the game that I grew up with and love. If any information is missing or incorrect, feel free to leave a comment or message me on Discord (this information can be found on my Wowhead profile). I frequently re-review my guides looking for areas that can be improved, so any suggestions are appreciated.
